

RESURRECT SERUM

BONN RESULTS

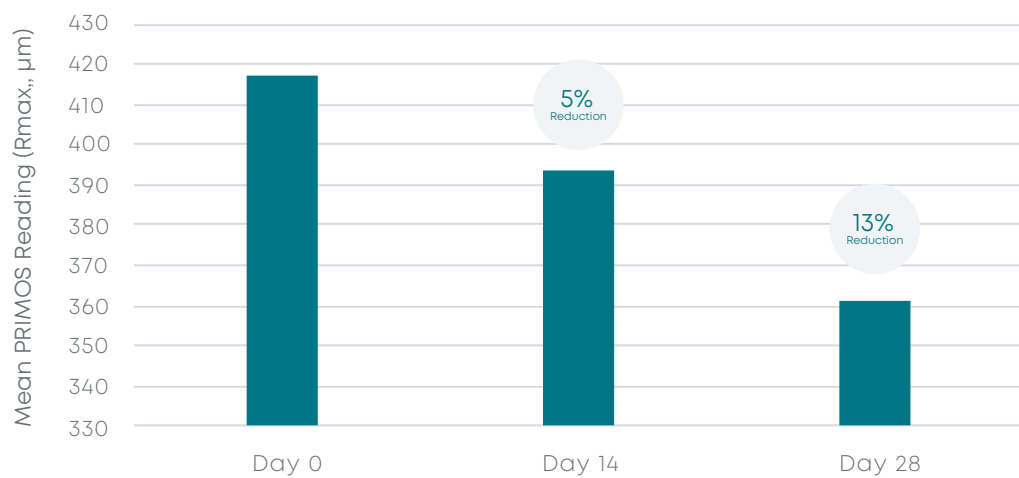

The Resurrect Serum makes use of an extract of *Myrothamnus flabellifolia*, the “resurrection plant”, wild harvested in Namibia. This plant can survive long periods of drought, and will revive when water becomes available again. In order to avoid DNA damage during these desiccation periods, the plant needs to employ a high level of antioxidant protection. The population of *Myrothamnus* used by Esse has an extremely high content of the polyphenol 3,4,5-tri-O-galloylquinic Acid, which provides this antioxidant activity.

Hyaluronic Acid provides hydration, reduces inflammation, and improves delivery of other actives. Bakuchiol offers anti-inflammatory activity and reduces collagen degradation. Gamma-aminobutyric Acid (GABA) relaxes the muscles under the skin to reduce wrinkles.

Wrinkle Depth

Esse Resurrect Serum **reduces wrinkle depth by 13%** in 28 days.

20 women (average age 47.6 yrs) applied Resurrect Serum twice daily. After 14 days, wrinkle depth had been reduced by an average of 5.3%. After 28 days, wrinkle depth had been reduced by an average of 12.9%. A positive effect was seen in 95% of the volunteers during the course of the study.
